

#### **KOMPOSYT: DIGITAL PLATFORM OF THE COMPREHENSIVE ADVISORY SYSTEM**

**It is one of the most important outputs of the national VÚDPaP project.**

KomposyT is a digital application platform that was created as a management aid for counseling system in the education sector of the Slovak Republic. Its role is not to replace consulting work of expert with a client by consulting services, but gradually develop and improve digital tools and applications that allow professionals to devote as much space, time and energy as possible to the direct contact with the client.

The public part - the website [www.komposyt.sk](http://www.komposyt.sk) provides a lot of information about solving children's problems. Provides direct contacts to experts in CPPP aP and ČŠPP who provide professional care. Through a number of professional content, it helps students in making decisions, choosing a secondary school and future profession. The private section acts as a digital workspace for users. It allows you to network experts and share good practice and experience. It helps professionals learn through e-learning and a host of digital learning resources. To the most important KomposyT applications are Diagnostics, which allows an expert to store information about "their" students/clients and use online testing in the counseling process through thirty digitized versions of diagnostic tools. All tests are evaluated automatically and the results are available immediately. This creates a better space for the expert for interpretation of results and setting the next steps of the counseling process with the student/client.
